

November 2024

DETAILED
FINDINGS

From The Benchmark Report:
RISE with SAP

Robert Holland

Sponsored by

1

Between August and November 2024, SAPinsider surveyed 125 members of its community to understand and gather insights on RISE with SAP, how customers' perspectives have evolved, and its role in the transformation strategies of the SAPinsider community.

Survey participants from various geographical regions worldwide represented diverse organization sizes, contributing to a comprehensive dataset.

Revenue

2

The participants were asked about the ERP strategies being implemented in their organizations.

They were also asked about their organizational roles and the market sector in which their organizations operated.

Industry

Role

3

Overall, awareness about RISE with SAP continues to expand as a significant jump is seen in those reporting being familiar with the offering.

However, it is still important for organizations to understand more about RISE with SAP given that it is the focus of SAP's ongoing cloud strategy. This understanding will enable organizations to determine how RISE with SAP will align with their ERP plans.

Familiarity with RISE with SAP

4

The biggest change this year has been in the level of familiarity that respondents have with the business process transformation tools offered by SAP Signavio. When compared to last year, this was one of the areas respondents were least familiar with. However, despite the interest generated by the generative AI capabilities offered in RISE with SAP, respondents have little knowledge about the offering.

Continuing to invest time in learning about RISE with SAP is crucial for organizations if they want to understand how it will support their innovation strategies.

Knowledge of RISE with SAP Components

5

Both large and small organizations realize the benefit of the single contract offered by RISE with SAP, making it the top choice in the list of potential benefits. However, what has seen a significant increase this year is the percentage of those that see RISE with SAP providing a platform for innovation.

Organizations need to carefully analyze the benefits to understand how RISE with SAP adds value to their specific needs.

What About RISE with SAP Provides the Most Benefit?

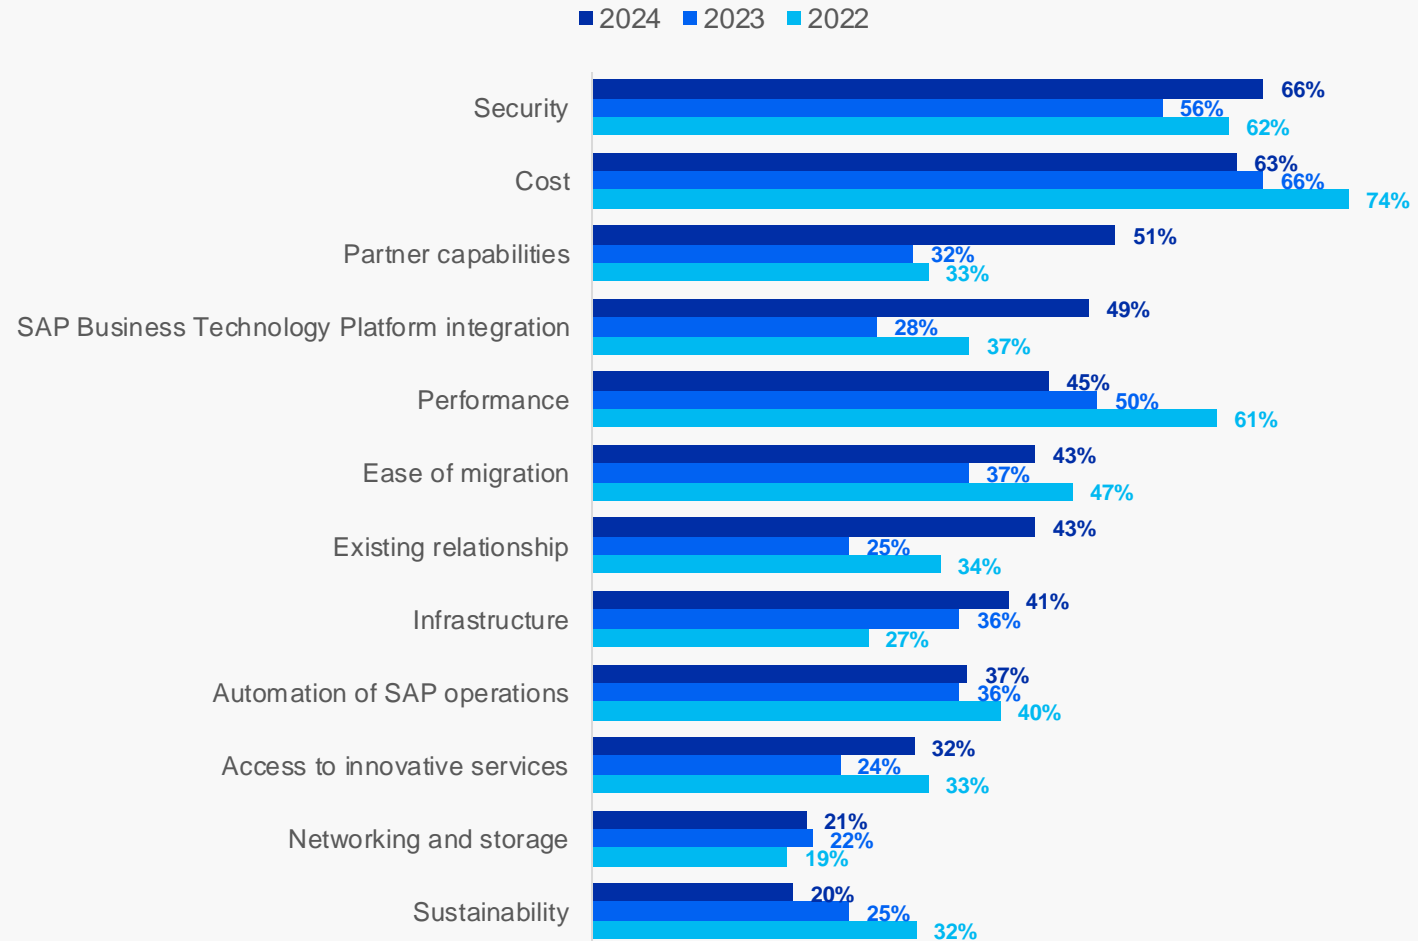

6

Security and cost continue to be the most important factors selected by respondents when it comes to choosing a cloud service provider for RISE with SAP, although partner capabilities and SAP BTP integration both saw significant growth this year.

Cost should not be the only factor when choosing a cloud provider for RISE with SAP. Factors like support for SAP BTP and availability of partner capabilities is also vital. This is why it is important for organizations to dedicate time to educating teams on the choices they will make.

Factors Choosing a Cloud Provider for RISE with SAP

DART

MODEL FRAMEWORK

RISE with SAP

DRIVERS

- Upcoming end of maintenance of core SAP ERP systems (44%)
- Need to update and improve existing business processes and create new operational efficiencies (40%)
- Opportunity to re-engineer processes to better fit operational needs and correct configurations from a previous ERP implementation (27%)

ACTIONS

- Architecting a unified IT landscape to provide better movement and integration of data (51%)
- Redesigning IT platform and architectures to lower costs and increase flexibility (46%)
- Updating and redesigning processes as part of a new ERP implementation (46%)

REQUIREMENTS

- Comprehensive monitoring to ensure system health and security (81%)
- Business process models that meet regulatory requirements for data management (78%)
- Best practice compliance checks that avoid outages (72%)
- Ability to have insight into process performance (71%)
- A partner with experience migrating and managing transactional and historical data (70%)

TECHNOLOGIES

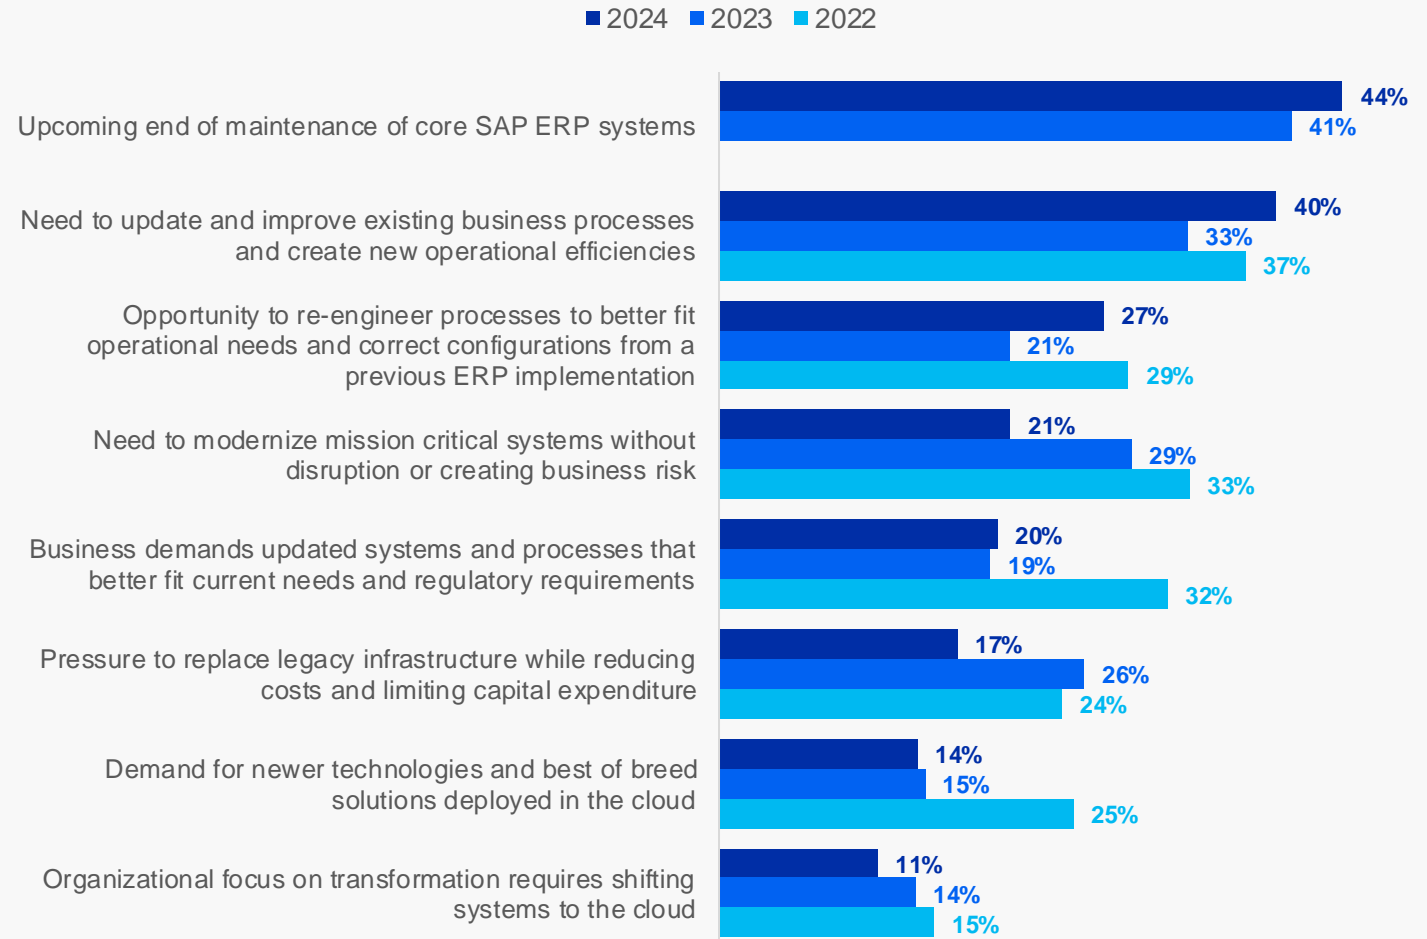

- High Availability and Disaster Recovery (55%)
- Managed infrastructure environments on-premise (48%)
- Cloud-based platforms and infrastructure (48%)
- Software-as-a-Service deployments (40%)
- SAP managed and tuned infrastructure (30%)
- Infrastructure automation (26%)
- Business process transformation tools (23%)
- Cloud-based ERP (21%)
- Custom code lifecycle management (21%)
- Data cleansing tools (18%)

7

The upcoming end of maintenance remains the biggest factor driving SAP S/4HANA and RISE with SAP adoption. However, there is also a continued need to update and improve existing business processes and drive organizational efficiency.

While organizations should already have plans in place for managing the upcoming end of maintenance, planning systems updates and processes as part of this change is also vital.

Top Factors Impacting Strategy for ERP and Innovation

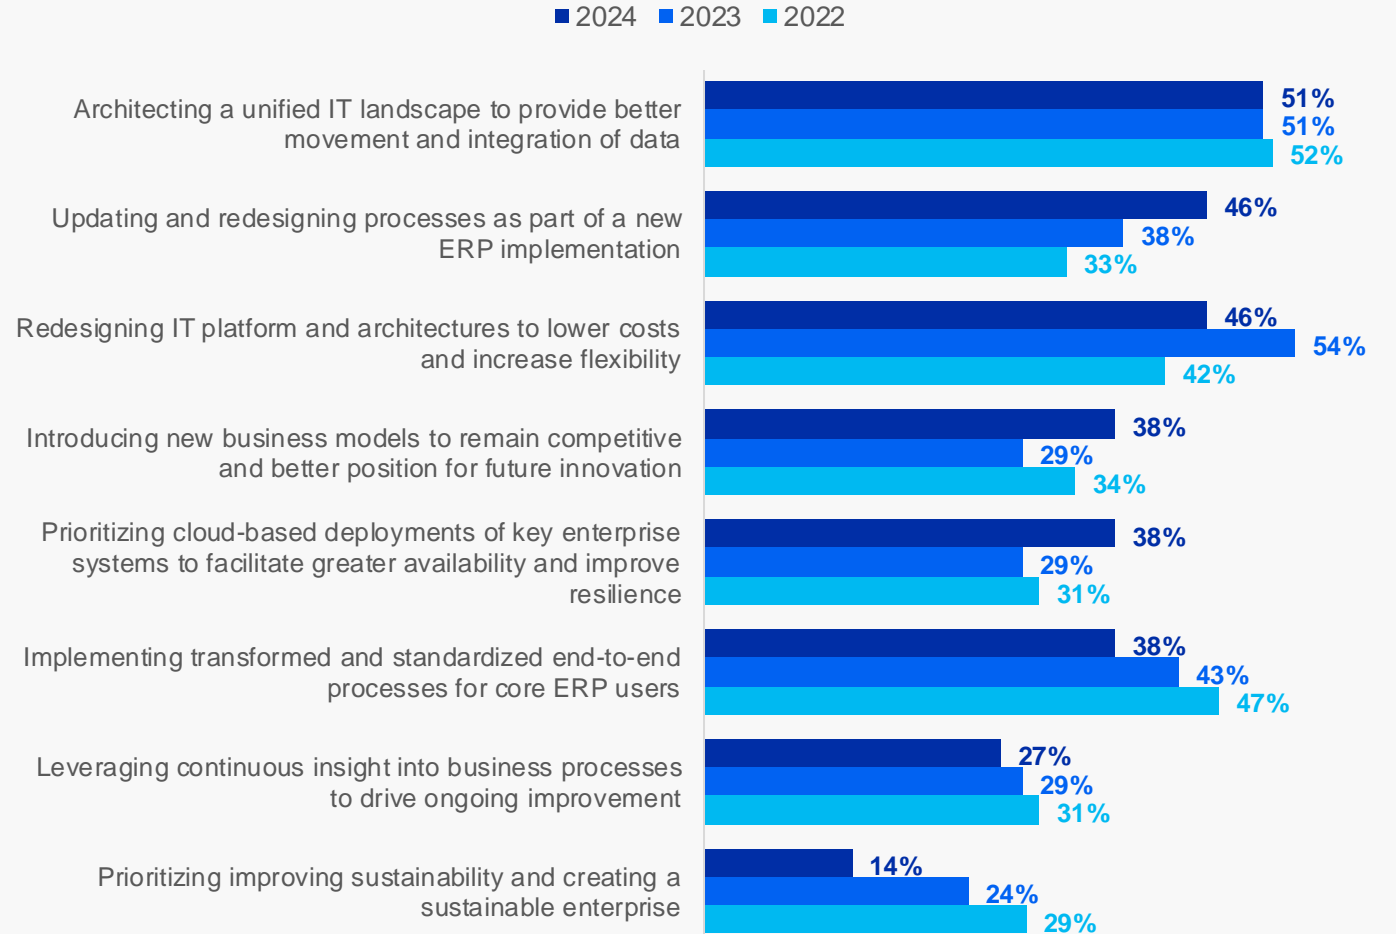

8

To support the need to update, improve, and re-engineer business processes, organizations are focused on their platform and landscape initiatives that will support this. However, even though updating processes is important, the priority continues to be data movement and integration. This is vital to any innovation platform.

Organizations must prioritize data and integration as part of any plans around innovation and process redesign.

Actions Taken to Support ERP and Innovation Strategies

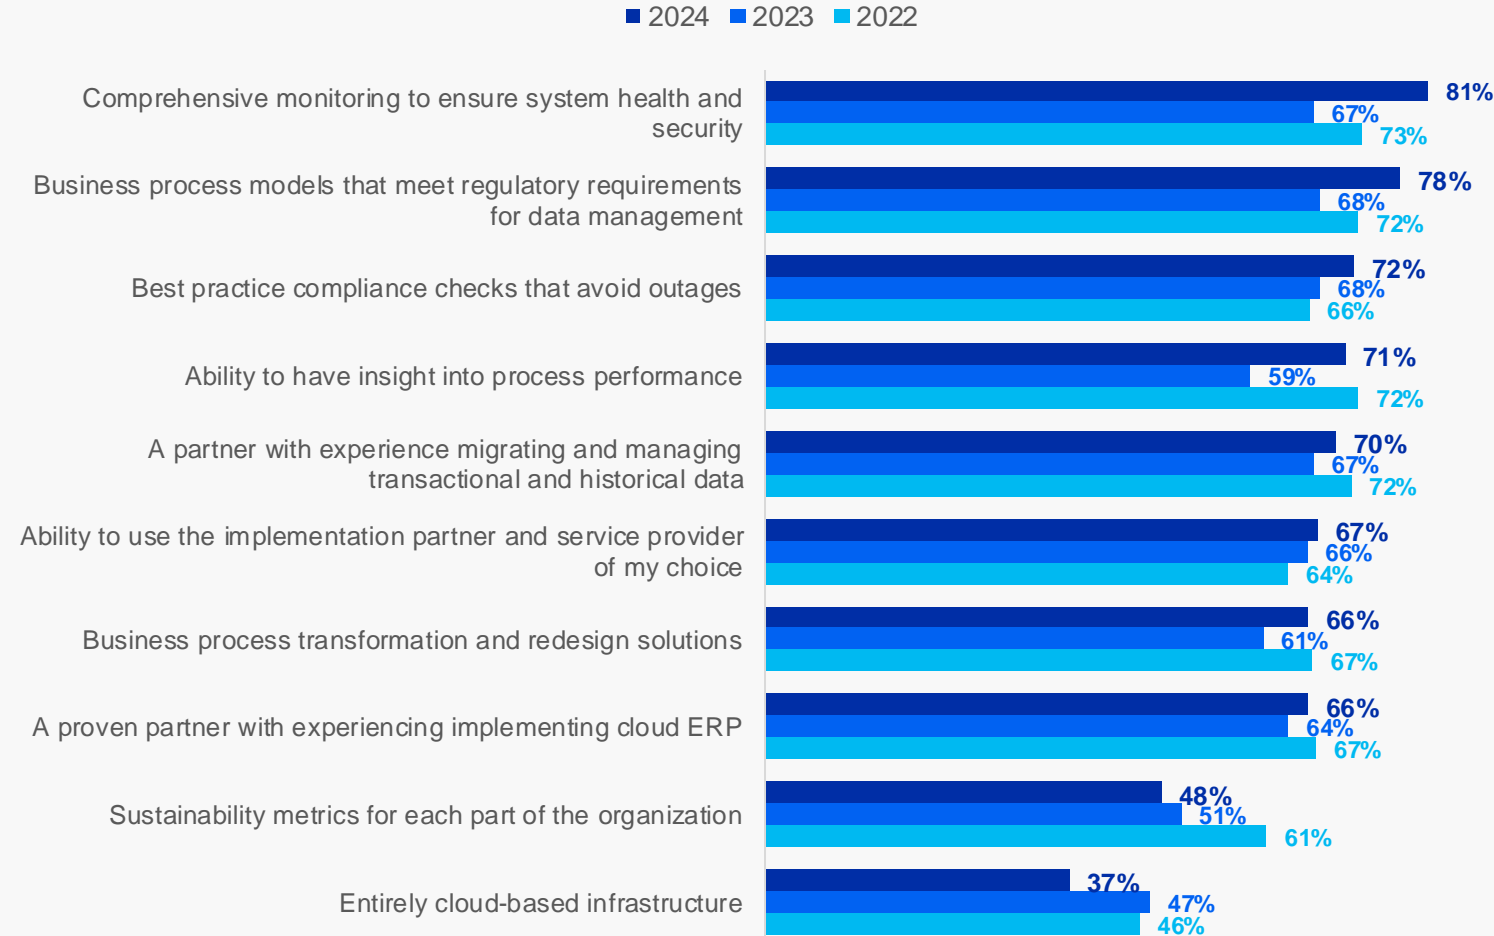

9

No matter what platforms are implemented, keeping them online and available is critical for businesses. This is why respondents emphasized system monitoring and best practice compliance checks that avoid outages.

Platforms like those offered through RISE with SAP can help provide greater resilience, but it is still incumbent on organizations to put their own systems in place to avoid potential outages.

Requirements for ERP and Innovation Strategies

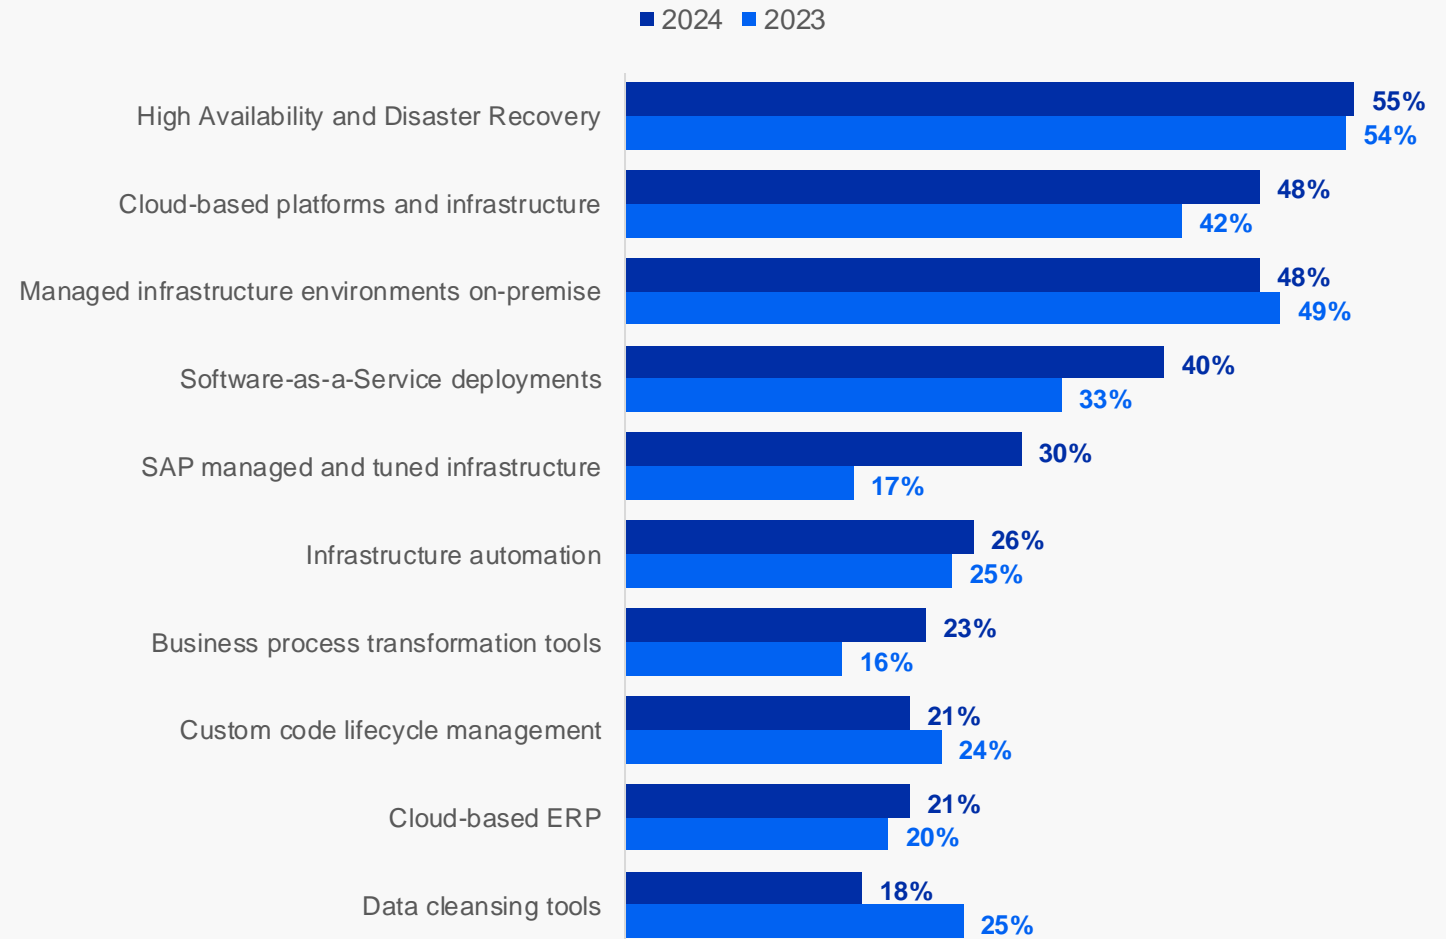

10

The focus on resilience is evident in the technologies powering ERP and innovation platforms. High availability and disaster recovery capabilities play a crucial role and are important for organizations moving workloads to the cloud, using managed infrastructure environments, and SaaS solutions.

Incorporating these capabilities into future technology plans is important for establishing any platform for innovation.

Technologies Being Used for ERP and Innovation

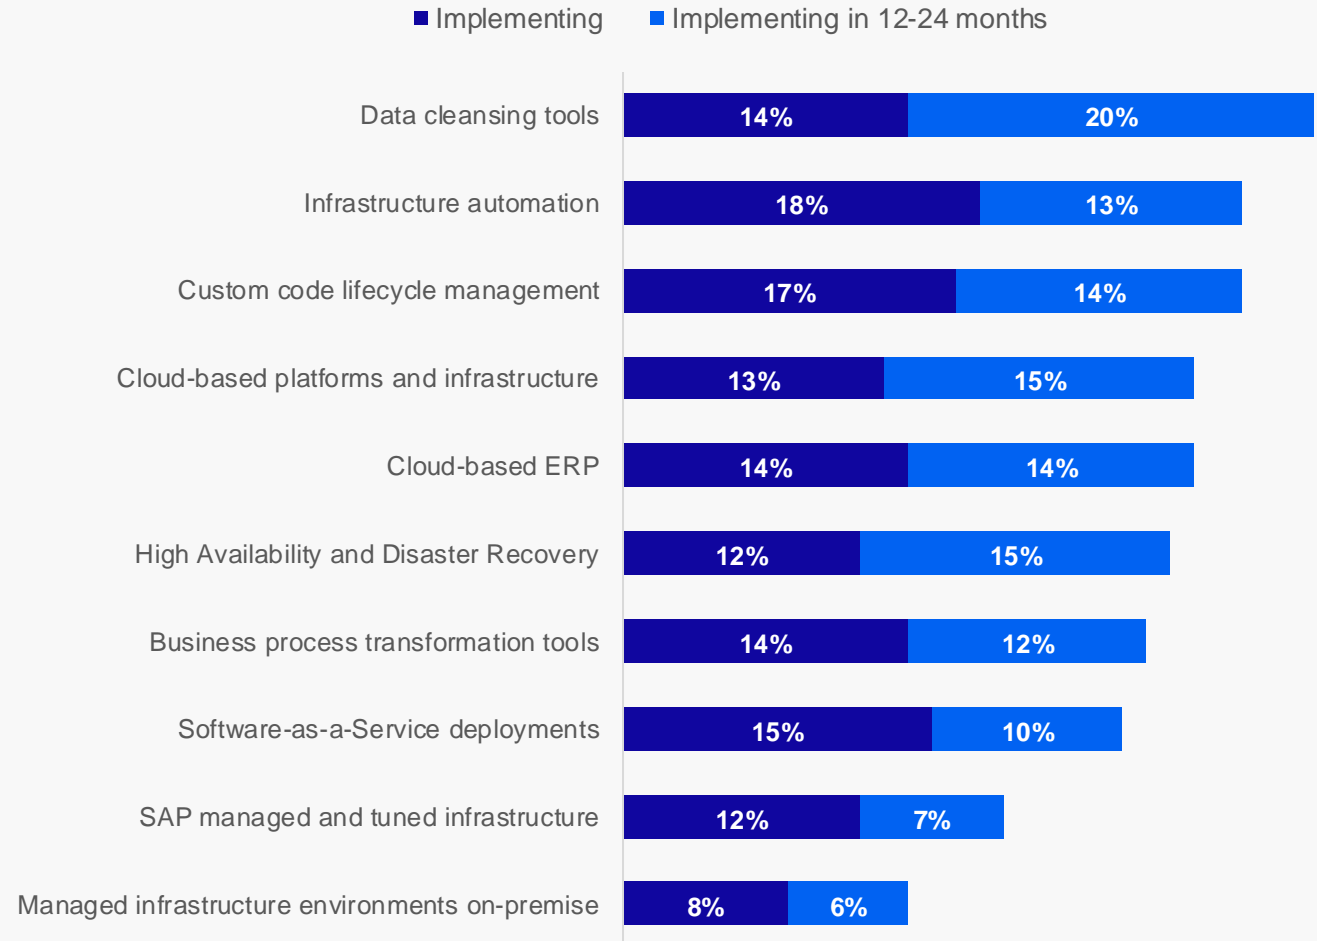

11

Following the strategy for architecting a unified IT landscape for better movement and integration of data, respondents are prioritizing the implementation of data cleansing tools as part of their ERP and innovation plans. This will not only help with preparation for a new ERP deployment, but will also provide a foundation for AI use.

Organizations should focus on implementing technologies that will help their existing ERP transitions as well as in preparing for the future.

Technologies Being Implemented for ERP and Innovation

12

If organizations are to update and improve business processes, they need technologies that will help achieve this. This explains why business process transformation tools are at the top of the list of technologies being evaluated for future use. But beyond this, infrastructure automation is also an important need as organizations look to reduce administrative overhead and better support faster deployment of systems and solutions.

Technologies Being Evaluated for ERP and Innovation

13

The proportion of organizations using SAP S/4HANA Cloud via RISE with SAP continues to grow. However, with little change in those reporting using SAP ECC or SAP Business Suite, the growth may have come primarily from those switching from SAP S/4HANA or older SAP S/4HANA Cloud licensing arrangements.

2027 is fast approaching and those still using older SAP ERP systems must ensure plans are in place to support their future ERP needs.

ERP System Currently Being Used

14

Generative AI capabilities available to organizations licensing RISE with SAP Premium Plus had only a minor impact on thinking about RISE with SAP last year. This year that changed significantly. Four in ten respondents now report that their perspective on RISE with SAP has changed specifically because of generative AI capabilities, and only half as many are looking for more information on the topic.

Has the Fact that Some Generative AI Capabilities Are Only Available to Cloud ERP Customers Changed Your Thinking on RISE with SAP?

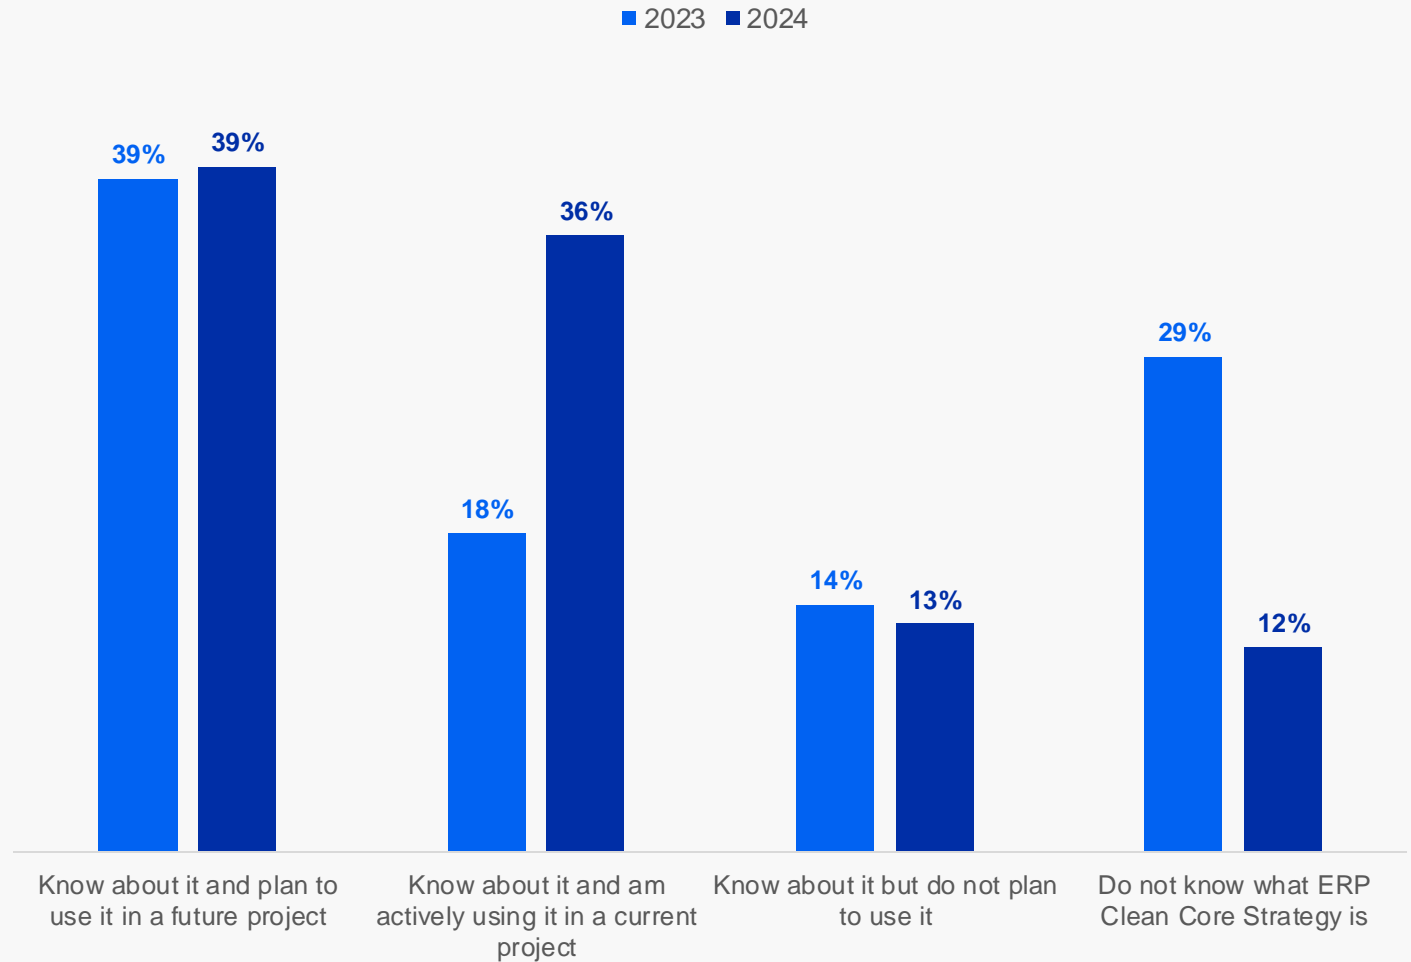

15

Only one in ten respondents report that they were unaware of ERP Clean Core strategy, a significant reduction from three in ten from last year. In addition, twice as many respondents reported their organization actively using a clean core strategy in a current project, potentially the move to SAP S/4HANA or RISE with SAP.

This change reflects active engagement by organizations looking to remediate or update existing customizations in an effort to create a clean core in their ERP systems.

Awareness of Clean Core Strategy

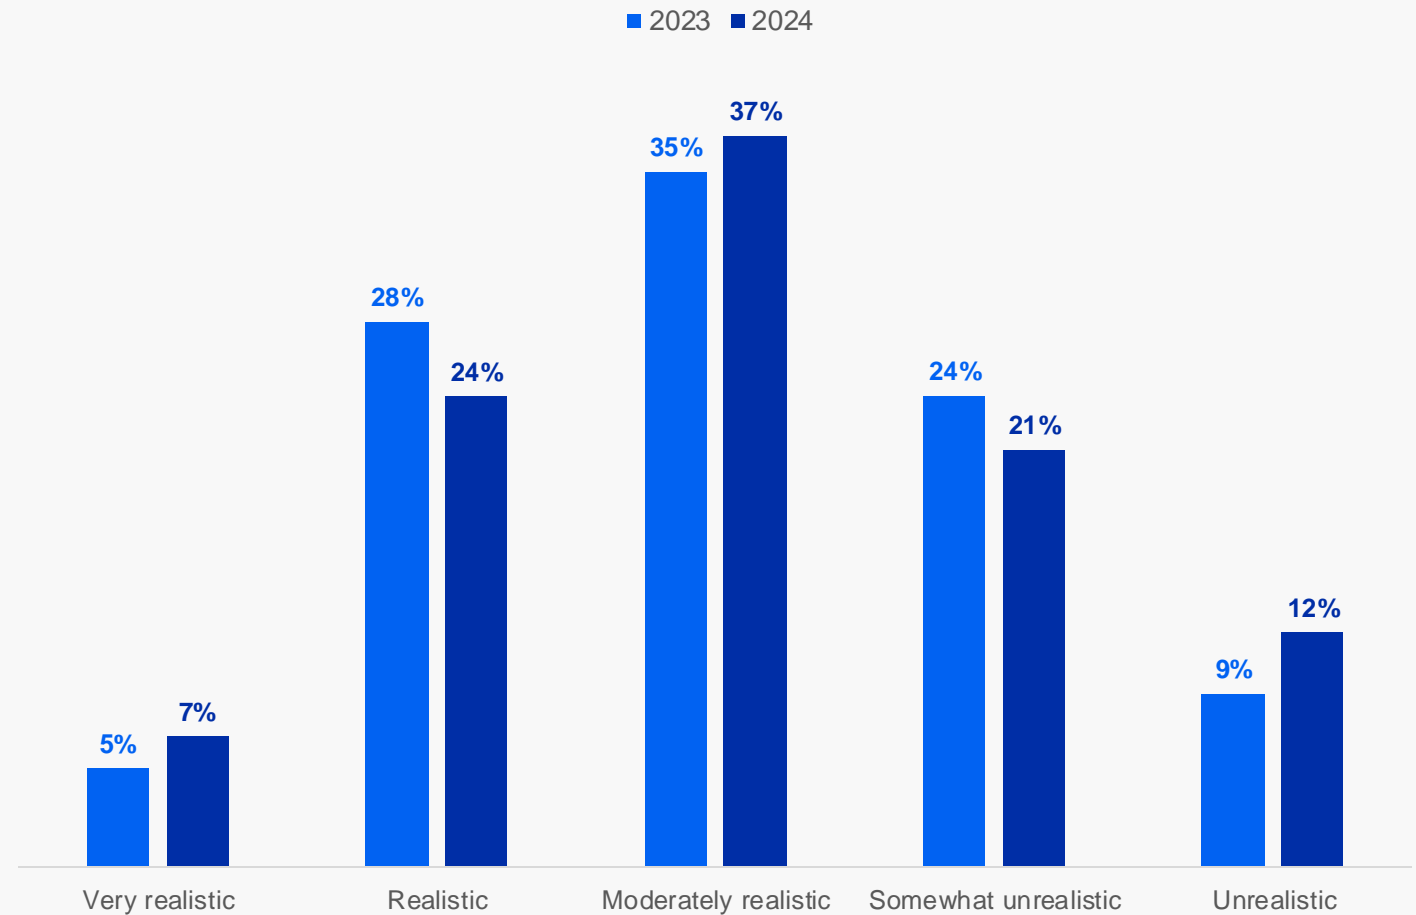

16

While more organizations are actively using clean core strategy, there has been little change in how respondents believe it is realistic to follow standardized guidelines for all elements of the core.

Using little to no customization, supported extensibility options, and keeping on the latest software version requires significant effort, something in which relatively few organizations are willing to invest.

Realism of Deploying a System Which Only Follows Standardized Guidelines for all Elements of the Core

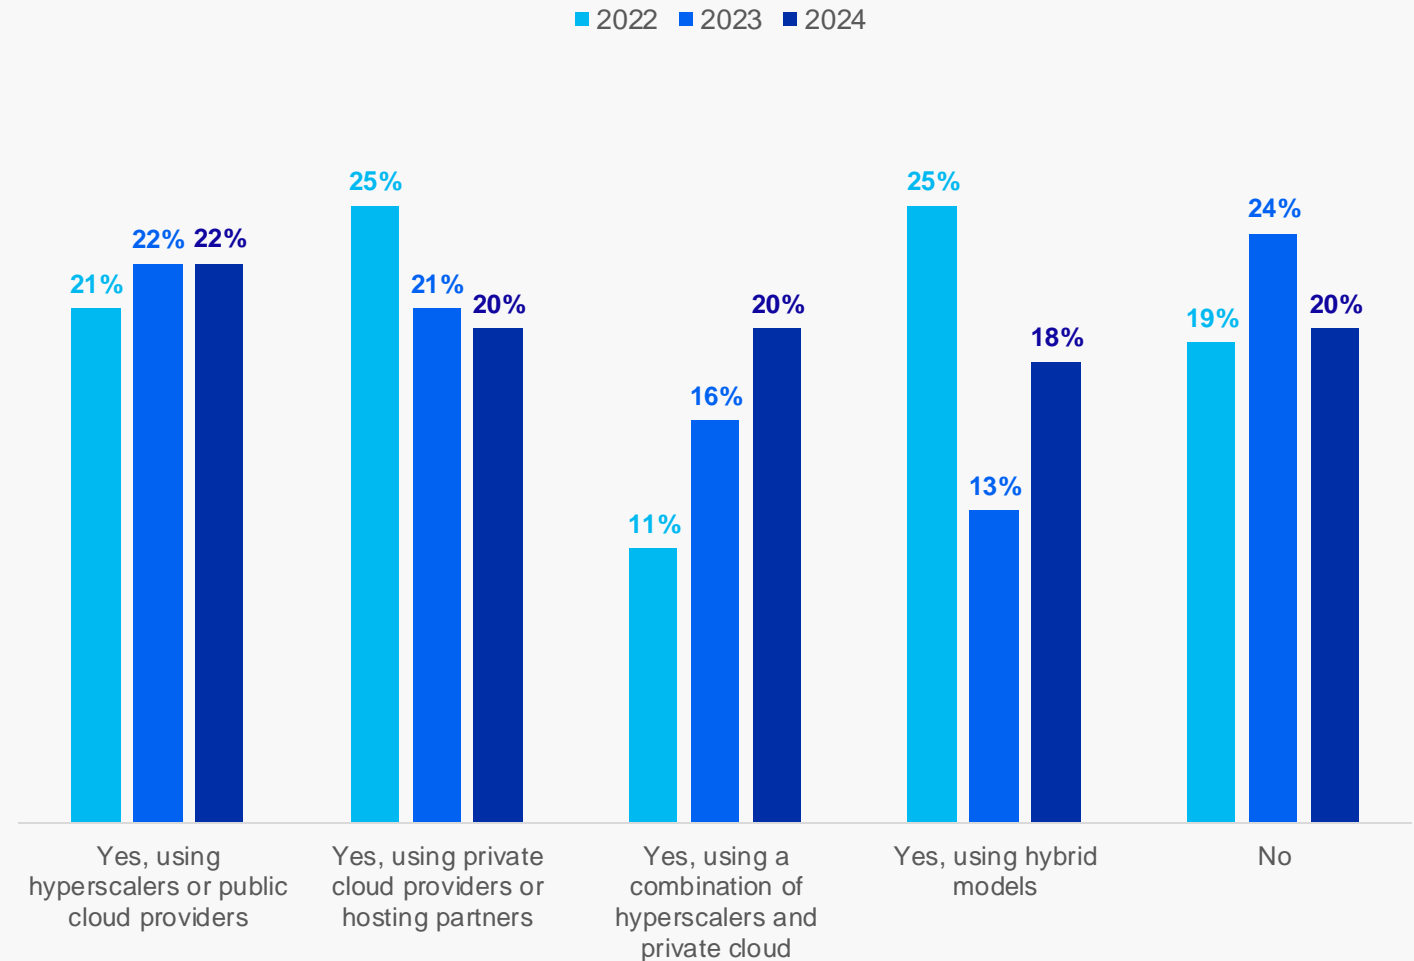

17

Cloud use for SAP workloads continues to steadily increase. Since many of these workloads are running on private cloud providers, or a combination of environments, organizations must ensure that they are prepared for the additional complexities involved in managing, operating, and securing such workloads.

This is especially true for integration points and areas where data is moving between cloud environments or cloud and on-premise solutions.

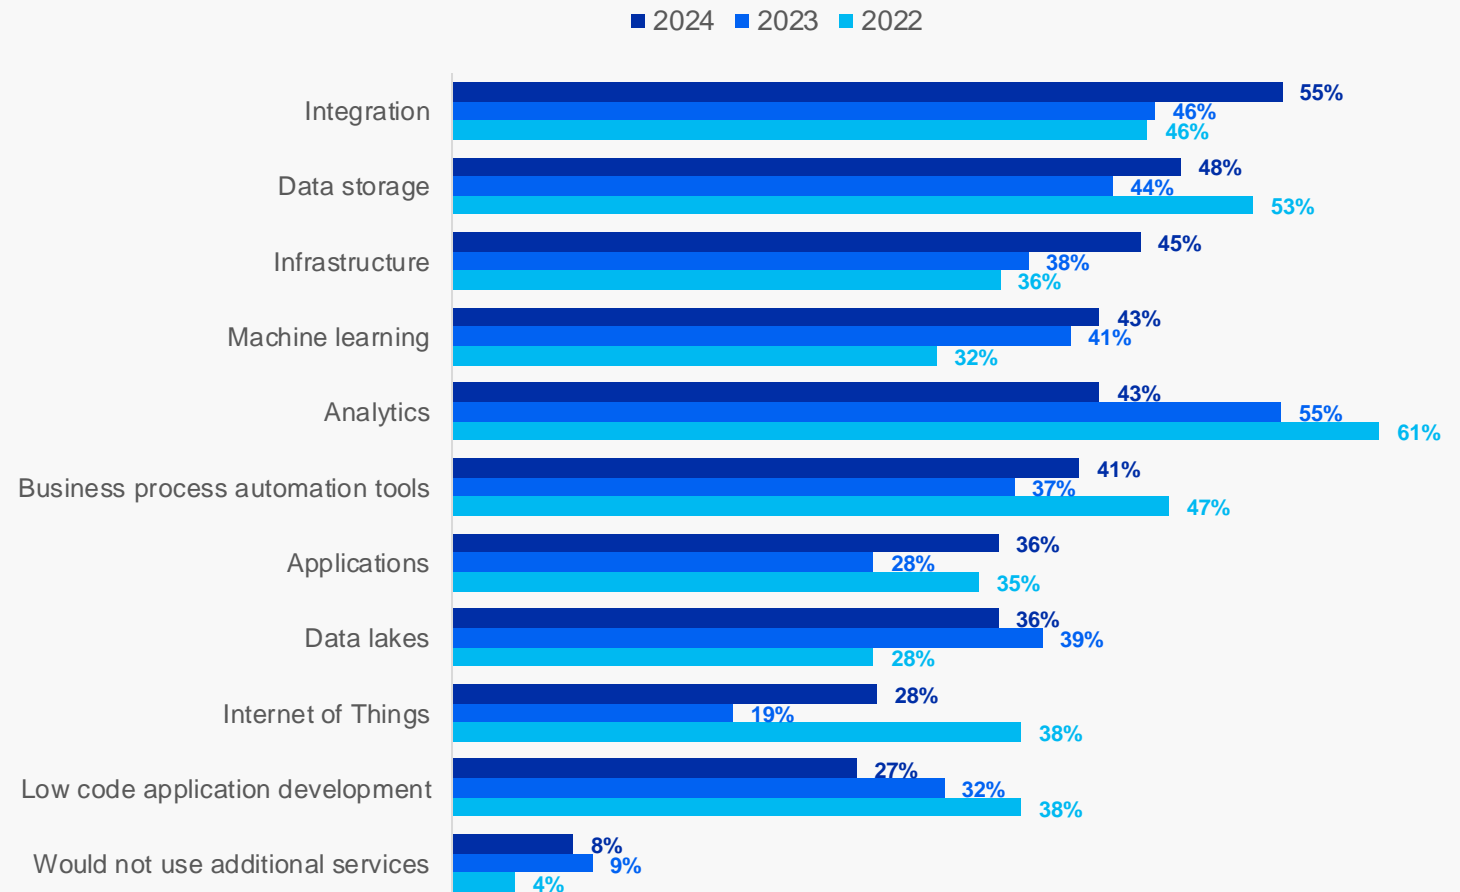

Cloud Use of SAP Workloads

18

Given the increased need for integration as more workloads move to the cloud, it is no surprise that integration and data storage are the preferred additional services to be leveraged from a cloud provider after implementing RISE with SAP. Also included are infrastructure services because connecting them directly to RISE with SAP can save both cost and complexity by avoiding data movement between SAP S/4HANA Cloud and other environments.

Likely Additional Services Leveraged from Cloud Provider After Implementing RISE with SAP

19

While larger organizations continue to select Microsoft Azure as their preferred cloud service provider for RISE with SAP, organizations with revenues below \$2 billion are more likely to use Amazon Web Services.

However, organizations need to consider the additional benefits that a cloud service provider can offer beyond support for the initial RISE with SAP deployment.

Likely Cloud Service Provider for RISE with SAP

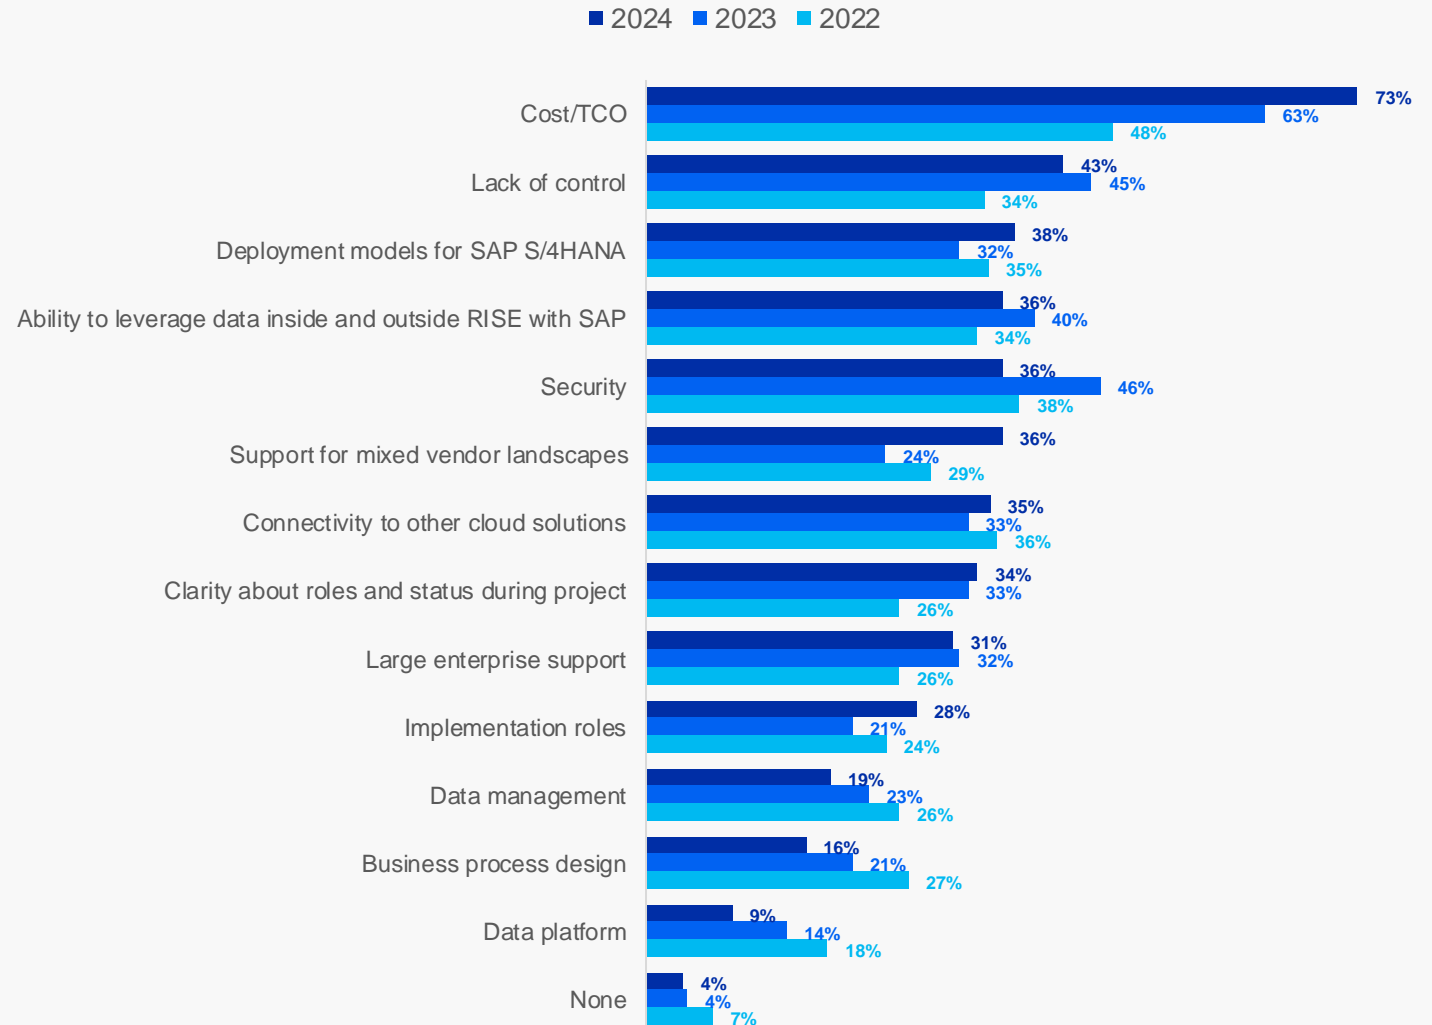

■ All Respondents ■ Large Organizations ■ Smaller Organizations

20

Although a growing number of organizations are adopting RISE with SAP, cost is the biggest concern for nearly three in four respondents. Over the past two years, this concern has grown significantly as SAP has introduced new packaging options and phased out the pricing that existed for early RISE with SAP adopters. Given the complexities of contract negotiation with SAP and the high cost associated with the offering, organizations need to understand more about RISE with SAP if they want to minimize cost.

Areas of Concern Regarding RISE with SAP

21

This year, nearly twice as many respondents compared to last year expressed confidence that using RISE with SAP does not restrict their choices when it comes to other enterprise solutions.

This shows that organizations are considering integrating RISE with SAP with other enterprise systems. However, SAP still has work to do since four in ten respondents still believe that their choices will be limited if they were to use RISE with SAP.

Would Using RISE with SAP Limit Choices Around Other Enterprise Solutions?
